

October 8, 2004

To whom it may concern:

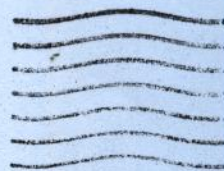

This letter will certify that I was the Construction Coordinator of the Wellesley Extension Sewer Project. This Project consists of seven contracts including rehabilitation of existing junction chambers and 60-inch diameter reinforced concrete pipe sewer lines.

The general contractor for Contract No. 7 was Insituform of New England. One of his major subcontractor on rehabilitation of the existing sewer lines was A&W Maintenance of Carver, Massachusetts. A&W performed cleaning and relining the existing junction chambers and about 1,000 linear feet of sewer line with epoxy liner. The subcontract amount is approximately \$1.2 million. Five years after the line was in used, inspection was conducted to see if the liner is still good. The result of the inspection was positive.

Respectfully,

Ruben R. Lagman
Retired Construction Coordinator (MWRA)
